---

**TECHNICAL PROJECTS**

---

**Awaken Social Book Club App - [Github](#)**

Full-stack application with a React frontend and a Rails API backend

- Implemented authentication, authorization, password protection for users
- Created 3 models with a many-to-many relationship with full CRUD actions on the join table
- Implemented complex frontend state management with full CRUD on join model while following RESTful routing conventions

**Hogwarts-ish React App- [Github](#)**

React frontend application with a Sinatra API backend that uses Active Record to access and persist data in a database

- Created with two models with a one-to-many relationship with create and read actions
- Implemented frontend state management using the React hook useContext with full CRUD on one model while following RESTful routing conventions

**B-Clever Budget App - [Github](#)**

- Engineered a budget and expense tracking application using React Router V6.8, React-Toastify
- Utilized JSON Web Tokens and localStorage to store encrypted user information client-side.

**Hunger Smash Recipe App - [Github](#)**

Single page React application

- Incorporated client-side routing and used json-server to create a RESTful API for the backend
- Created multiple components and client side routes using RESTful routing conventions

**TV Show Search App - [Github](#)**

Single page application built with HTML, CSS, and JS that communicates with a public API

- Search for TV shows based on the genre

---
